Head of Audits at SMC Audits · Solana Builder and Writer

Consumer and infrastructure products, protocol and security research, and the threads and reports that make it useful to others.

"Independent Phase 1 Security Audit of Toly's Percolator was quoted by Toly and verified."

Anatoly Yakovenko
Co-founder, Solana

"First place. Unanimous winner across the team. Clear, insightful, beautifully designed thread plus an applied doc with 48 hours of hands-on GetBlock research."

PROFILE

I ship consumer and infrastructure products across Solana and Circle's Arc, and I lead security as Head of Audits at SMC Audits. Most recently I founded and led Siren, a prediction market trading terminal that integrated Kalshi and Polymarket, Privy embedded wallets, and real-time PnL over live USDC and SOL balances. My security work spans EVM and Solana, including an independent Phase 1 audit of Toly's Percolator that was quoted and verified by Anatoly Yakovenko, and I write the threads, articles, and weekly reports that make the work useful to others. Solana builder since 2023 and Core Member at Superteam Nigeria.

EXPERIENCE

ACHIEVEMENTS

- Head of Audits at SMC Audits, leading EVM and Solana security reviews
- 300k+ impressions across threads and articles
- 14x Superteam Earn bounty winner ($5,000+ earned)
- 3x hackathon winner: Superteam Earn sidetracks (Torque Protocol, Sagapad, Jupiter)
- Run a private developer community, weekly sessions with 45 attendees
- Percolator Phase 1 audit quoted by Anatoly Yakovenko (Toly)

Head of Audits

2026 – Present

SMC Audits

- Lead smart contract and protocol security audits across EVM and Solana, from scoping through responsible disclosure and fix verification.
- Run adversarial reviews of DeFi protocols, launchpads, and on-chain financial infrastructure, proving findings with fork and local proof-of-concept exploits.
- Author and maintain Kensho, a public offensive-security playbook for Web3 assessment and responsible disclosure.

Founder and Lead Developer

2025

Siren, prediction market trading terminal

- Built a prediction market trading terminal that aggregated Kalshi (via DFlow) and Polymarket, integrating live order placement, position tracking, and closing across providers.
- Implemented Privy embedded wallets with real-time USDC and SOL balance reads using Solana web3.js and SPL token accounts.
- Built a persistent data layer on Supabase for hedge history and PnL, with real-time PnL streamed over Supabase Realtime (WebSocket subscriptions) in place of polling.
- Designed a natural language trading agent covering intent parsing, market matching, and edge-case handling, plus a risk layer for correlation and concentration.
- Hardened API routes with error handling and retries; shipped end to end and processed over $2,000 in trading volume.

Independent Builder and Researcher

2023 – Present

Solana and Circle's Arc

- Shipped Keryx, a pay-per-call monetization layer for AI agents on the x402 protocol with USDC settlement on Arc, with a full site, docs, and whitepaper.
- Published an independent Phase 1 security audit of Toly's Percolator risk engine, quoted and verified by Anatoly Yakovenko, then shipped the Percolator SDK and dashboard on npm as @percolatortool/sdk.
- Shipped Gloam (private trading on Robinhood Chain), Onca (Solana agent-payment tooling in Rust), Hanko (claim records for tokenized assets), Swindle (AI chess arena with on-chain USDC wagering), Vector, Bulldropper, crewdeck, and Deriverse.

SKILLS

LANGUAGES

TypeScript, JavaScript, Rust, Solidity, Node.js

FRONTEND

React, Next.js, Tailwind CSS, Framer Motion

BACKEND AND INFRA

Fastify, REST / GraphQL, Supabase (Postgres, Auth, Storage, Realtime), WebSockets, webhooks

SOLANA AND WEB3

web3.js, Anchor, Wallet Adapter, SPL / Token-2022, Jito, x402, USDC, Privy, Jupiter, DFlow

HELIUS

RPC, webhooks, and DAS API across all Solana projects

SECURITY

Smart contract auditing (EVM and Solana), responsible disclosure, fork and local PoC exploits

PRACTICE

Data pipelines, technical writing, Git

LANGUAGES

English (Fluent)

French (Intermediate)

Igbo (Fluent)

EDUCATION

African Leadership University

Starting January 2027

Secondary School Certificate

St. Paul's Academy, Jos

2017 – 2023, Science and Mathematics

Core Member and Community

2024 – Present

Superteam Nigeria

- Core contributor driving growth of the Solana ecosystem in Nigeria.
- Run technical workshops, create educational content, and connect developers with resources and opportunities.

Frontend and Product Developer

2023 – Present

Freelance and Partner Projects

- Built responsive React, Next.js, and TypeScript web applications and Web3 product interfaces.
- Delivered brand identity and a production e-commerce site for KD Essence, plus landing pages and dashboards that improved performance and engagement.

Security Researcher, Graduate

2025

Rektoff

- Graduated from Rektoff's security researcher program, covering EVM and Solana vulnerability classes, auditing methodology, and responsible disclosure.
- Carried the methodology into live protocol audits, proving findings with fork and proof-of-concept exploits.

SELECTED WRITING

- The Aggregator Inversion (BullpenFi)
- Prediction Markets Are Not Gambling
- Building on Bayse
- The Security Layer for Solana's Agent Economy (Bento Guard)
- The Precision Gap (Trepa)
- solweekly, weekly Solana ecosystem reports

TALKS AND MEDIA

- Privacy in onchain finance · Superteam Startup Village talk
- Founders Corner Ep. 01: building Gloam · 3rd Variation interview
